

Food2Water

Food2Water presents the **Food Waste Liquefier™**
The Eco-Friendly Solution to Food Waste Disposal™

Food2Water

The Mission

Food2Water endeavors to impact the two pillars of scarcity-from Food to Water. Where there is lack, Food2Water will strive to bring about abundance through its branding, fueled by joint venture and venture capital. All the while never losing sight of having fun and being passionate in all it does.

When clients consider that they're effectively paying twice for the food they serve - once for purchasing it and again when paying to have it taken away for waste - reducing food waste becomes a no brainer for helping the planet and profits.

Go **Green** by Adding **Green** to Your Wallet TM

By virtually eliminating food waste
disposal

The **Food2Water** Food
Waste Liquefier™ saves
money and increases the
clients profits

Food2Water presents the Food Waste Liquefier™

Managing organic waste has never been easier

A highly refined formula of safe-to-touch government approved and certified micro-organisms produce enzymes that aerobically breakdown organic waste into city compliant water that is simply discharged down the drain

How the Food2Water Food Waste Liquefier™ benefits clients

Virtually eliminates food waste, significantly reducing disposal volume -
significantly reducing monthly disposal costs

Virtually eliminates food waste related rodent and insect infestation - added
savings and cleanliness

An enclosed disposal system - a cleaner disposal environment

Contained food waste disposal - virtually eliminating odors

Increased employee efficiency - savings in consolidation, cleanliness, and
employee time expenses

The Food Waste Liquefier™ Process

- Safe and Effective Food Disposal
- Digests food within 24 hours
- Rapid ROI
- Improves on-site sanitation

STEP 1
Add
Microorganisms
Setup

STEP 2
Add Organic
Food Waste to
the digester
compartment

STEP 3
Water is
automatically
added and food
begins breaking
down immediately

STEP 4
Discharged
water enters
the drain ending
the
decomposition
process

Here is how the magic happens.....

Food2Water's Microorganisms

The **Food Waste Liquefier** is a machine that decomposes food waste into water by using patented microorganisms. The special microorganism, which is being used for “ESL Series”, converts protein, fibroid material, and fatty oil contained in the food waste into water.

As such, “ESL Series” provides the utmost condition in which the microorganism decomposes the food waste into water as quickly as possible. “ESL Series” changes 98% of the food waste into the water within 24 hours that can be discharged into a connected drain pipe. This makes it possible not only to reduce 40%-70% of the cost for the food waste disposal, but also to help protect our environment. There are diverse models of “ESL Series” that are differed by their capacity Series of decomposing food waste. ESL 130, 220, 320, 550, 700, all suitable for all businesses.

Digestion Rates for Various Foods

The turnaround time depends on the food that is introduced.

Model	Capacity	Dimensions
ESL/ESLX-130	220 lbs	2'6"(W)3'4"(L)3'6"(H)
ESL/ESLX-220	330 lbs	3'0"(W)4'6"(L)3'10"(H)
ESL/ESLX-320	440 lbs	3'3"(W)5'2"(L)3'10"(H)
ESL/ESLX-550	660 lbs	3'10"(W)5'7"(L)4'10"(H)
ESL/ESLX-700	1,000 lbs	4'2"(W)5'7"(L)5'2"(H)

The Benefits of **Food2Water** and Our **Food Waste Liquefier**™

Business Advantages

Food2Water will lower your hauling costs by 40-70% by eliminating your food waste each month.

Having trouble financing?... Food2Water offers in-house leasing and financing for all customers with great low rates.

Food2Water provides in-house servicing for all accounts 24 hours a day.

Food2Water will come in and train your business' respective employees for 3 days, which other companies do not offer.

Food2Water machines are digital as opposed to analog and that adds on more savings to the bottom line.

Equipped with a full sales force and experienced executive team we will not be outperformed or out serviced, GUARANTEED.

Key Points in Making Your Decision

Operating the system at it's full capacity for one year will reduce emissions of 443,000 pounds of CO2 and 55 MTCE of greenhouse gases. That is equivalent to taking 40 cars off the road, saving 1,200 pounds of diesel fuel and planting almost 100 trees.

Food2Water's revolutionary machines virtually eliminate pest control problems that are hindering your work environment and improve sanitation.

Imagine investing in a technology that returns 5x more than your original investment and helps your company take the first steps in going Green and preserving our environment for generations to come.

Added benefits to the business of running a busy facility

- Significantly reduces hauling costs
- Food waste no longer needs to be maintained on premises
 - Sanitation dramatically improves
 - Safety and workflow conditions improve
 - Trash and recycling containers stay cleaner
 - Reduces odors and airborne bacteria
 - Reduces pesticide applications
 - Janitorial supplies dramatically reduced

The Food2Water Solutions Business Advantage

- In-house leasing program - significantly improve your ROI from day 1 of installation
 - In-house Service Department - 24 hour response time guarantee - minimum downtime
- Qualified Annual Service agreement - professional quarterly cleaning and microorganism fulfillment
- Excellent Referral Program - our business grows through qualified referrals

Waste Management and Recycling

Environmental Responsibility meets Fiscal Responsibility

Recycling is more than a buzzword for the environmental movement. Recycling - of glass, metals, paper, plastics, water and more - now represents significant cost savings to individuals, organizations and governments.

Don't Throw It All Away

Without a comprehensive strategy for recycling and solid waste management, organizations **spend more for waste disposal, lose significant recycling dollars, face long-term liability risks and devalue property**. With today's complex regulatory environment and ever-changing waste and recycling statutes and regulations, expert advice and planning is crucial to avoid **disputes, court matters and fines**.

Recycling and Waste Management Solutions

A successful recycling and waste management solution balances the demands and expense of recycling programs with cost-effective waste removal and disposal.

Food2Water utilizes years of active involvement in the solid waste and recycling industries to create innovative asset recovery programs through its Waste Audits and Recycling Programs.
